mootools-core

mootools-core is an object-oriented JavaScript framework that has tons of helpful utilities for working with the language's various data types, AJAX, basic animations/effects, and more. It's got a huge docs site, a custom builder to include just the parts of the framework you need, and best of all, an upcoming plugin repository called Forge that's backed by GitHub.

AND THEY APPROVED

1.5 BILLION DOLLAR NET WORTH...

This plugin is replacing a textual rating by a graphical rating using CSS. It's easy to use, fully customizable and degrades gracefully. It also supports animations.

Consider the following markup:

```
1 <table>
2   <tr>
3     <td>The Rum Diary</td>
4     <td class="movie_rating">95</td>
5   </tr>
6   <tr>
7     <td>Gozilla ate my pants</td>
8     <td class="movie_rating">25</td>
9   </tr>
10 </table>
```

By default you get two rating bars where "95" and "25" stood before:

The Rum Diary 

Gozilla ate my pants 

Advanced settings

Alright let's get a little more fancy. Let's add some easing effect. Use the following button to make the magic happen: [Click](#)

Awesome rating 8
Mediocre rating 3

HUGBOT

andygrunwald opened on Oct 24, 2015

Member

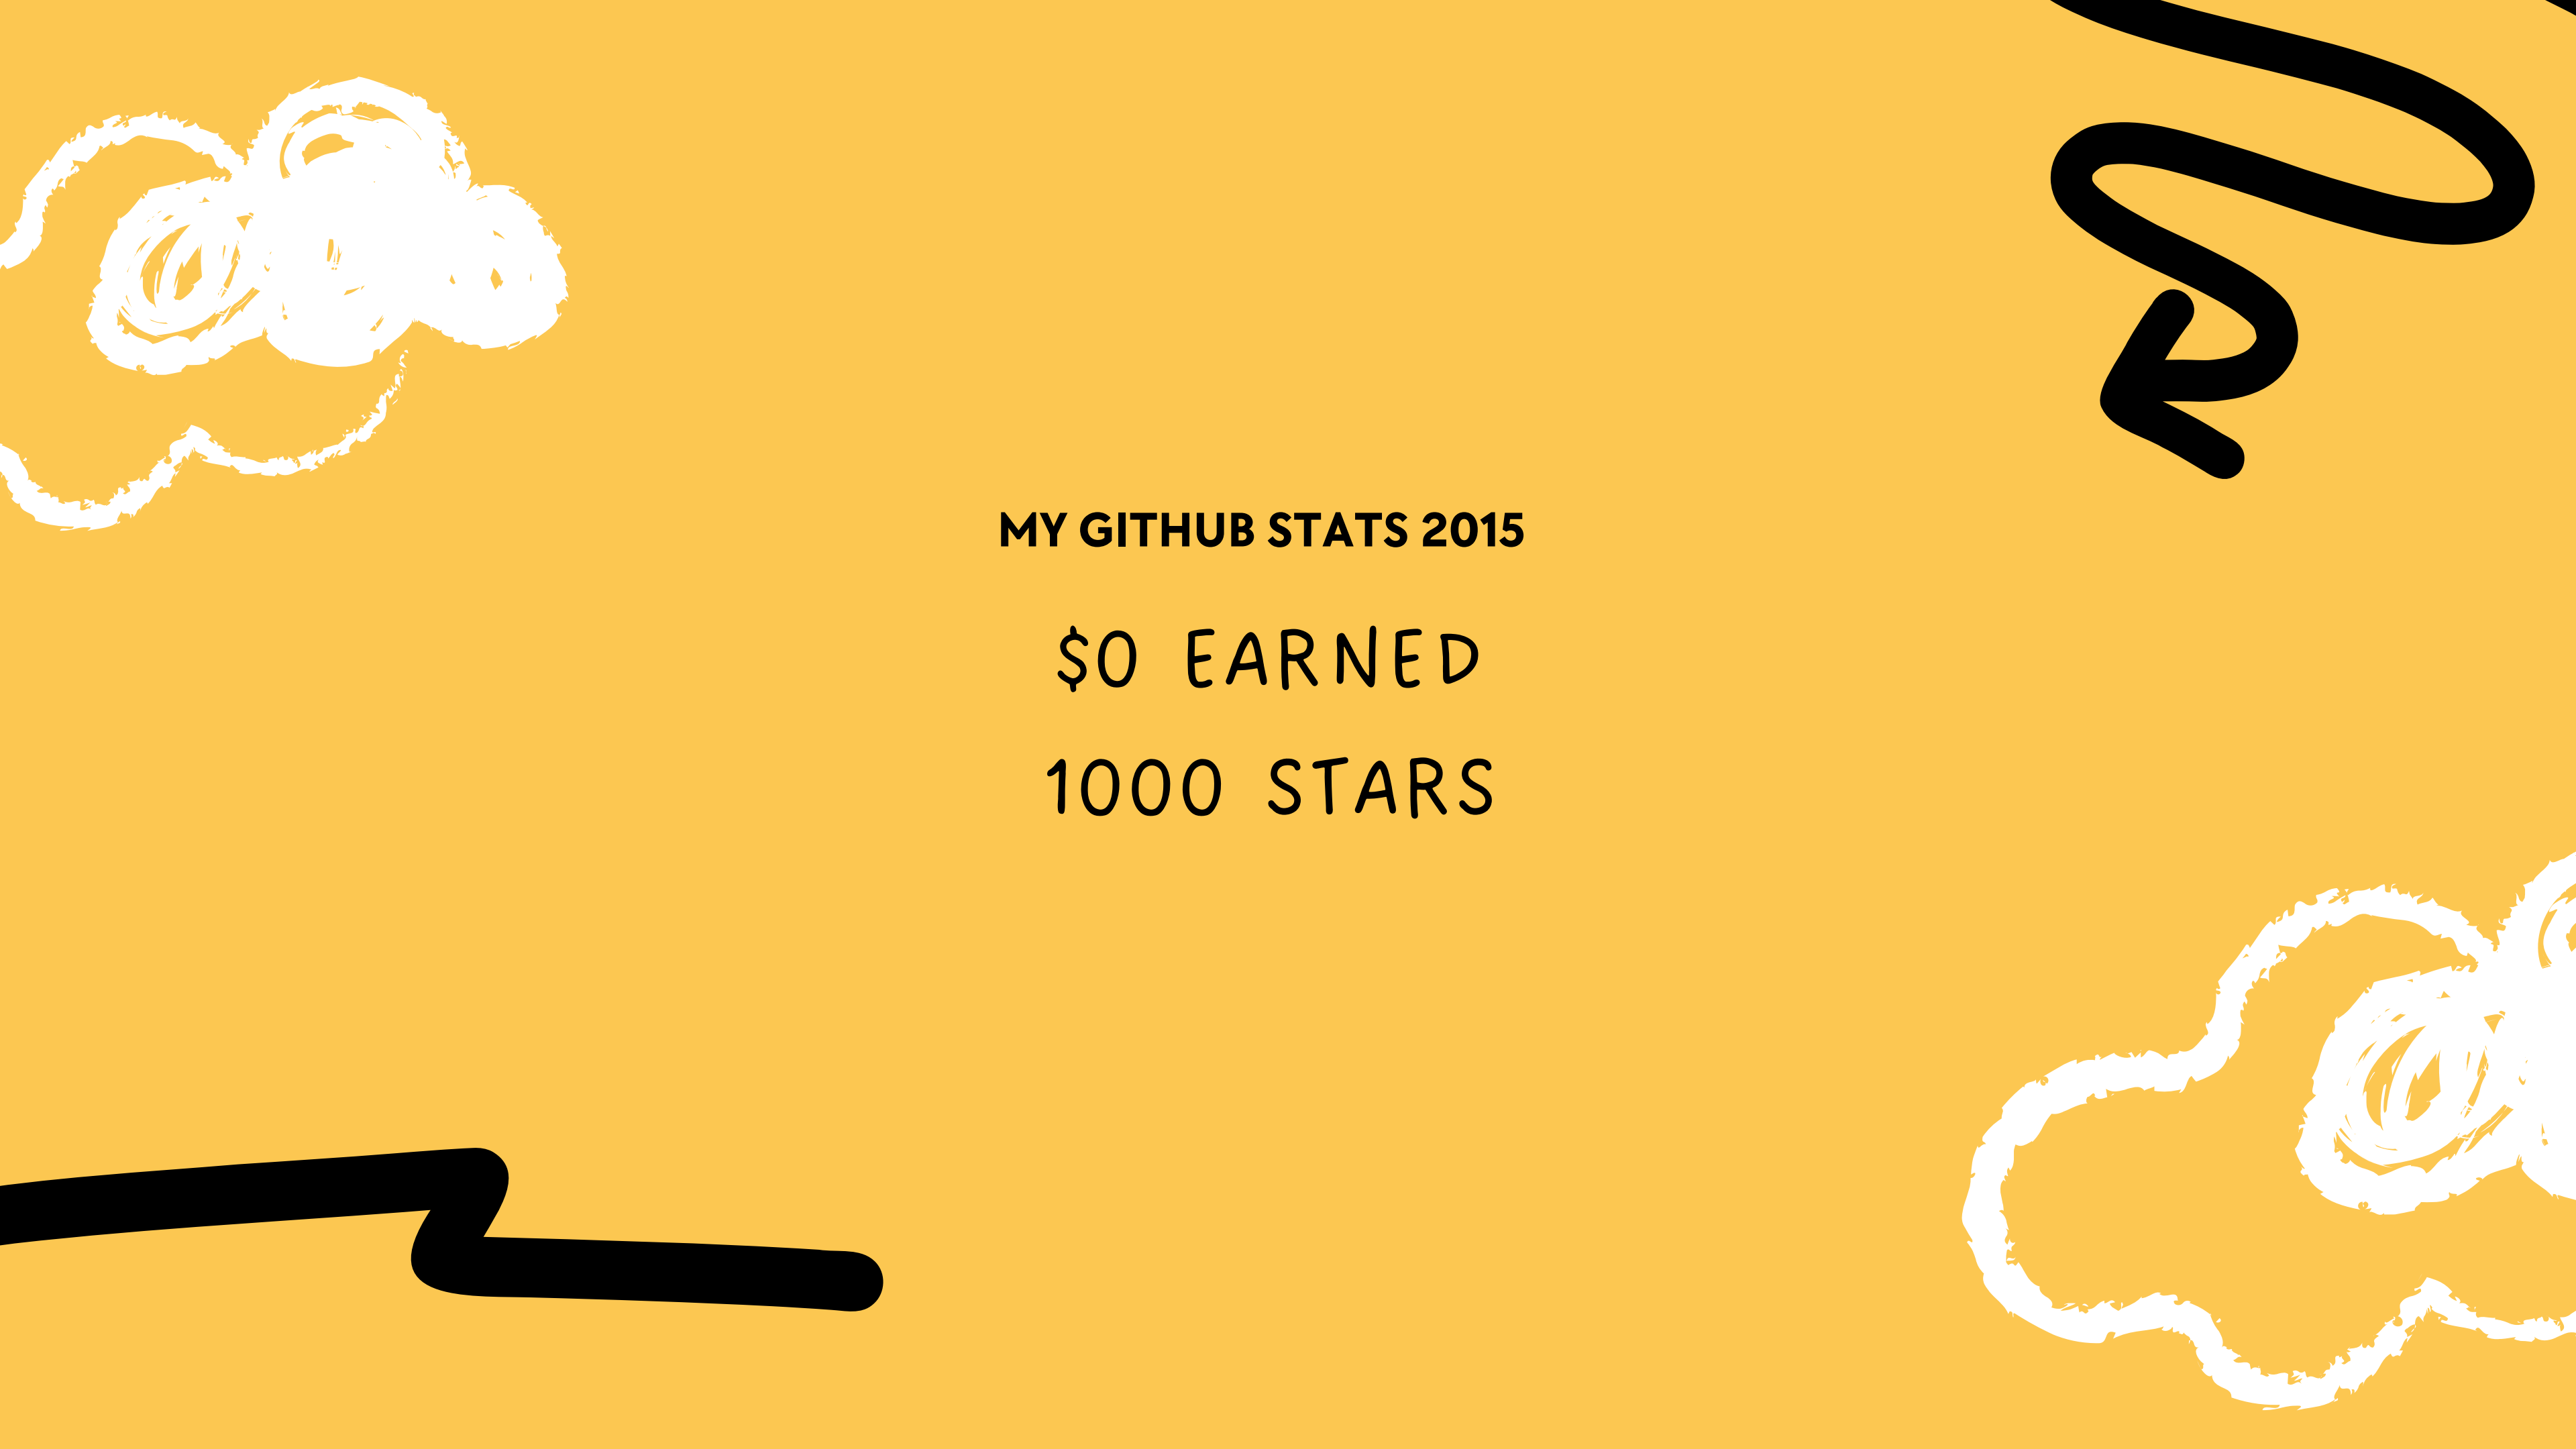

The hugbot project was marked as bot.

I contacted the Github support to get a few more details. Here is the anser:

Hello,

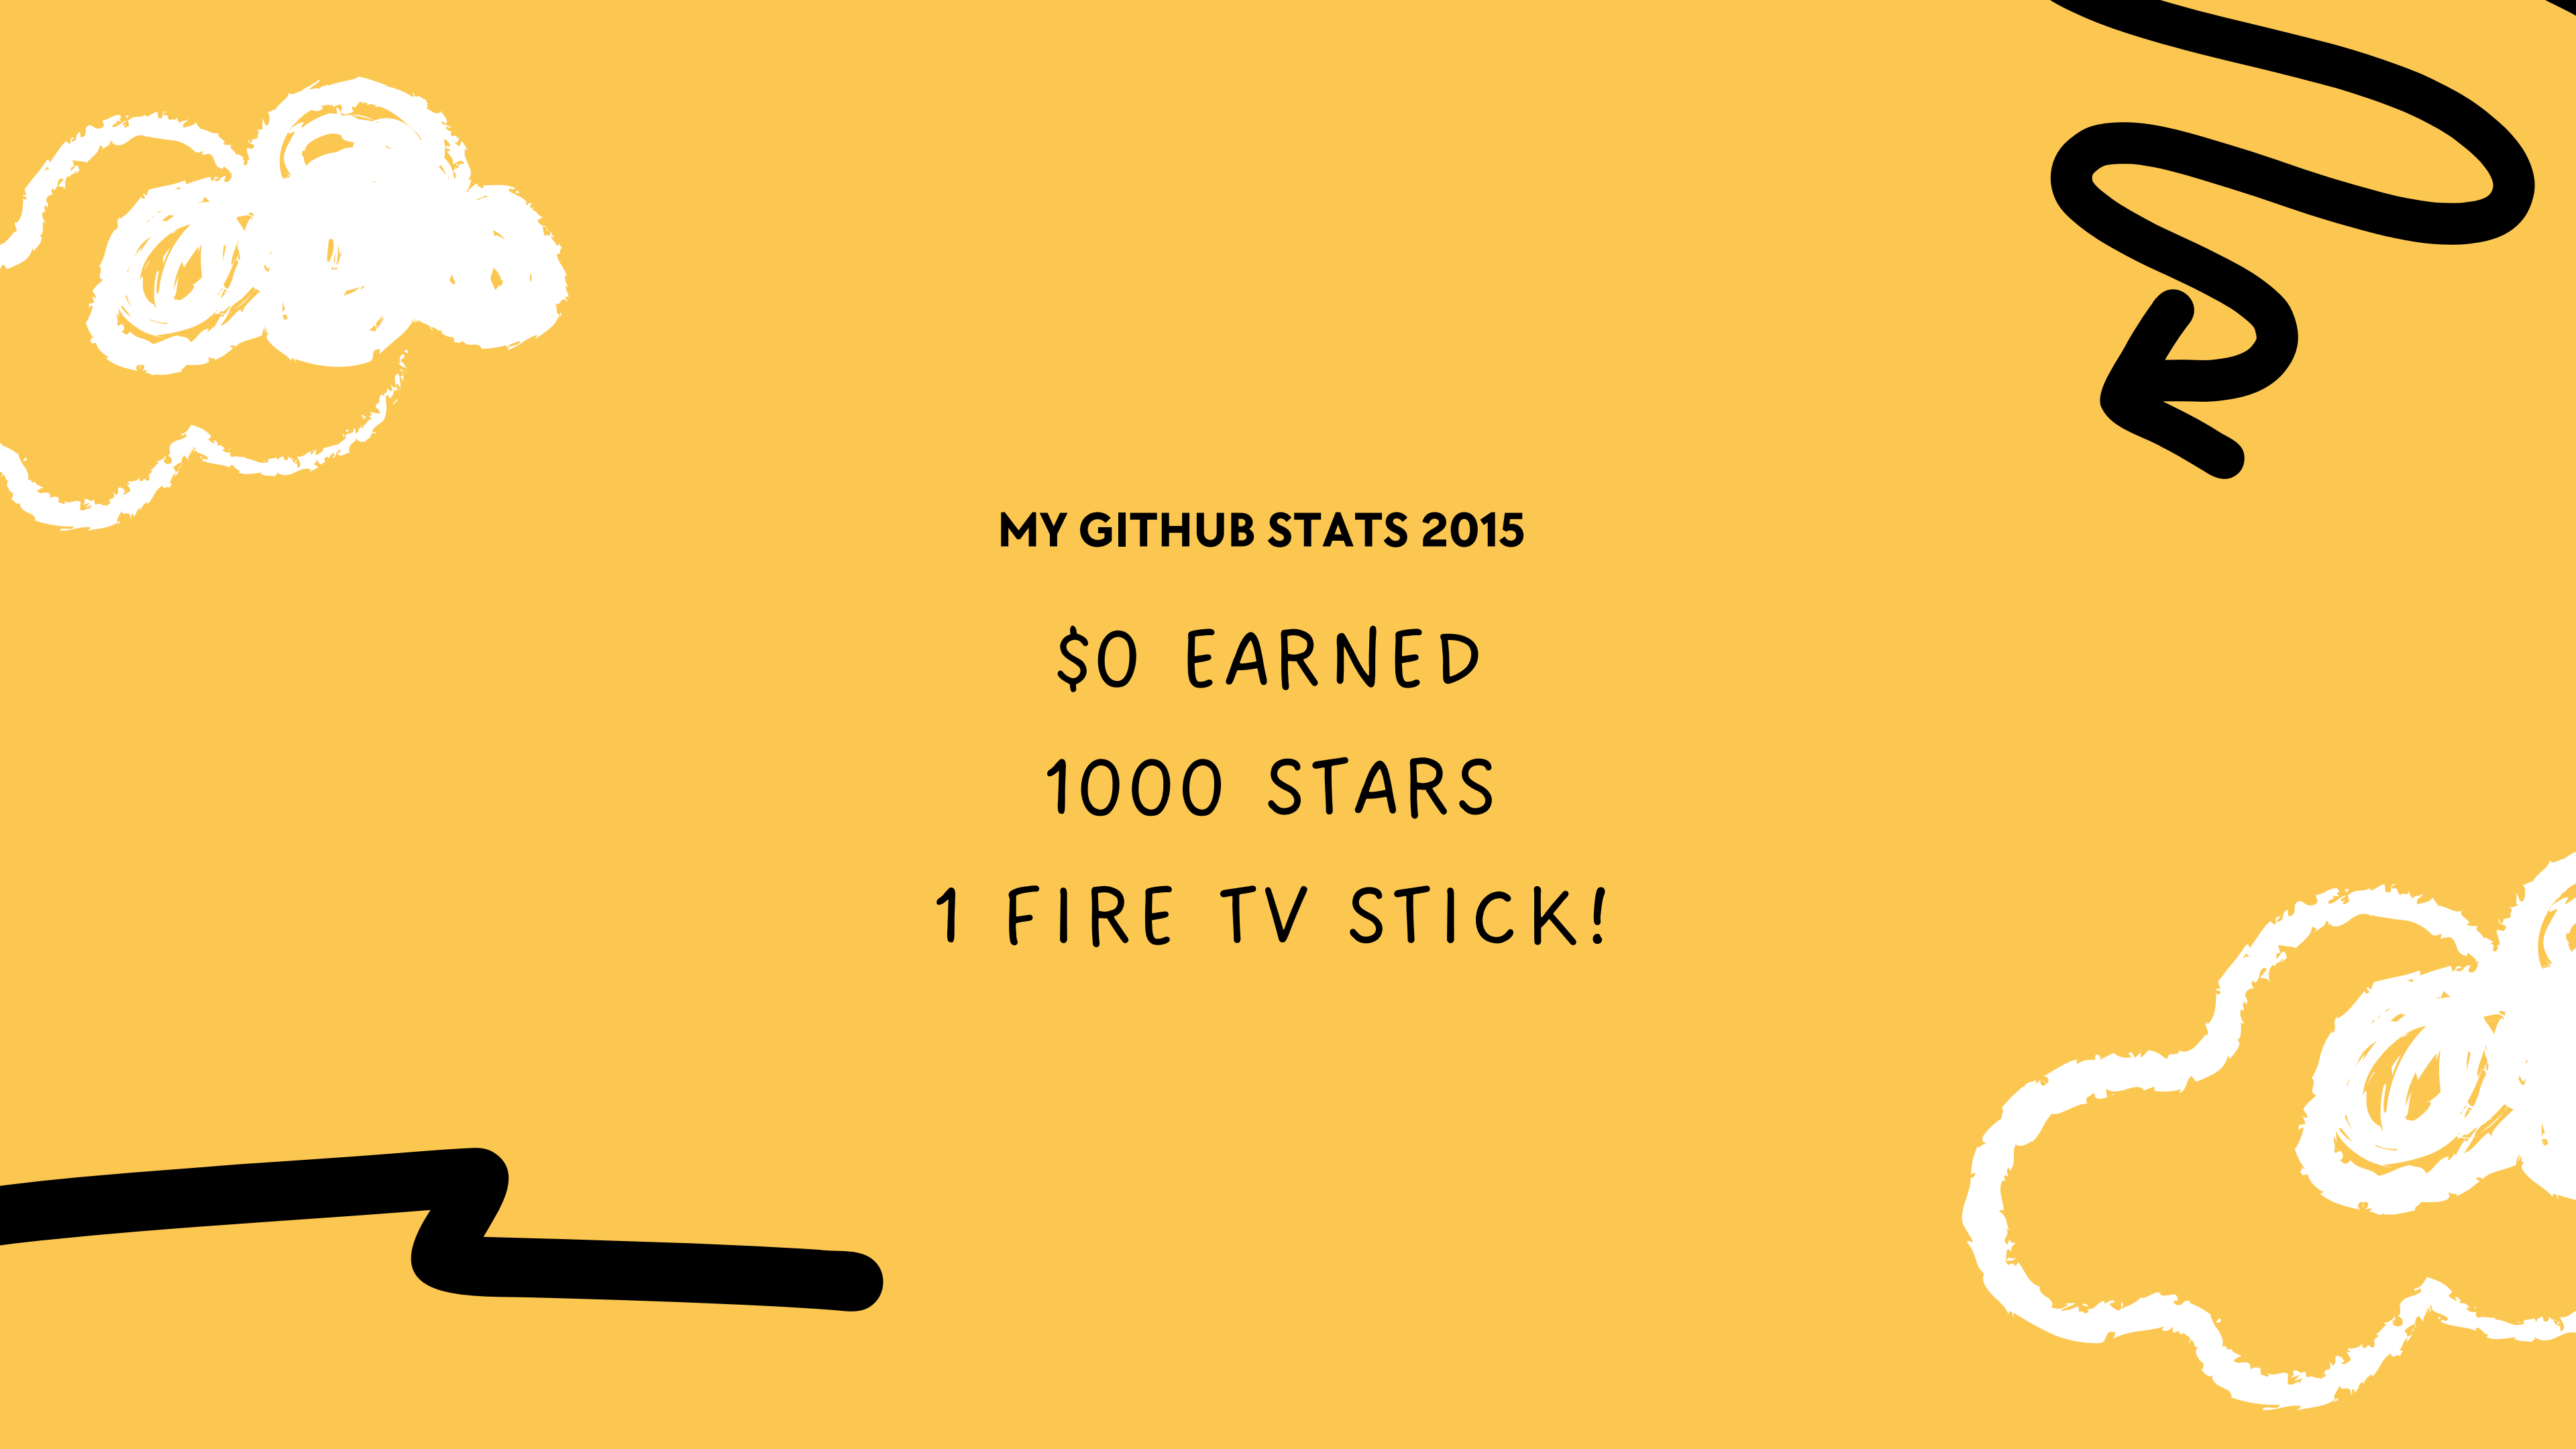

Thanks for reaching out! We love the creativity of the Hugbot project and as much writing as we do day > after day, we we always appreciate a good spell check. However, we have received reports fromGitHub users who are concerned about receiving automated, unsolicited pull requests and see this as a distraction to the intent of their project.

import teams_call  
  
isInCall = teams_call.isInCall()
```

WriteRoom

WriteRoom is a Mac-only writing app.

It takes a distraction-free approach to its interface. As you can see, there are no extraneous menus.

There are some special features, however, such as Highlight Current Line. The current line being typed is shaded gray while the surrounding text appears as normal.

A wordcount appears at the top of the file, next to the file

I've created a prototype to read email attachments and write the files to the Dropbox directory. After the import the Gallery is automatically refreshed.

I need this functionality to automatically import files and give other people (like my family) an easy way to add pictures to the gallery. With this feature and the usage of an old iPad I can hand over a digital photoframe to my grandparents for Christmas ;)

As said, it's a prototype but I would like to share this idea with you. Even if it could also be a different repo or else.

The Reality of Developer Burnout

January 05, 2017 in Development, Journeys

Burnout is, unfortunately, a very real phenomenon in software development — especially when creating and maintaining open source projects with large numbers of users. I've experienced it, and I wanted to share my personal experience with the subject.

It happens to everyone that writes code all day long — the sudden feeling of "I'd rather do anything else than this right now" — even though writing software is one of your favorite activities in the world.

You suddenly realize that you've been eating ice cream for every day for years on end. You're tired of it; you don't want cream any more. People who eat ice cream occasionally wonder this; how could you possibly want less ice cream?!

— Gary Bernhardt

<antirez>

The struggles of an open source maintainer

antirez 521 days ago. 141823 views.

Months ago the maintainer of an OSS project in the sphere of system software, with quite a big and active community, wrote me an email saying that he struggles to continue maintaining his project after so many years, because of how much psychologically taxing such effort is. He was looking for advices from me, I'm not sure to be in the position of giving advices, however I told him I would write a blog post about what I think about the matter. Several weeks passed, and multiple times I started writing such post and stopped, because I didn't had the time to process the ideas for enough time. Now I think I was able to analyze myself to find answers inside my own weakness, struggles, and desire of freedom, that inevitably invades the human minds when they do some task, that also has some negative aspect, for a prolonged amount of time. Maintaining an open source project is also a lot of joy and fun and these latest ten years of my professional life are surely memorable, even if not the absolute best (I had more fun during my startup times after all). However here I'll focus on the negative side; simply make sure you don't get the feeling it is just that, there is also a lot of good in it.

Lychee

Reliable and fast link checker to combat linkrot

Links are the glue that holds the web together, but broken links undermine our collective digital knowledge. With 54% of Wikipedia references and 70% of links in legal journals now dead, link rot is a serious threat to information accessibility and makes for an unpleasant web experience.

Lychee is a fast, memory-efficient CLI tool written in Rust that detects broken links in Markdown, HTML, and plain text. Over the past 4 years, it has been adopted by tens of thousands of public repositories and organizations like Google, Microsoft, and AWS. The project will focus on three key milestones: implementing recursion support to check entire websites at once, adding per-host rate limiting to prevent server overload and stabilizing the codebase for a 1.0 release. By improving Lychee, we're helping everyone from small websites to major platforms maintain their corner of the open web and preserve our digital heritage.

▸ The project's own website: <https://lychee.cli.rs/>

Open Podcast

Open Podcast baut ein freies und offenes Ökosystem für Podcasts auf. Das erste Projekt zielt darauf ab, bessere Analysedaten für Podcast-Hosts bereitzustellen.

Ihr wollt es selbst ausprobieren? Unsere Fellows bieten gerade kostenlose Demos für Podcast Hosts an.

Jetzt Termin vereinbaren

Open Analytics für Podcasts

Wie viele Downloads hatte mein Podcast insgesamt auf Spotify und Apple? Wie viele Hörer:innen hatte meine letzte Podcast-Folge? Welche Folge war die beliebteste? Mit Open Podcast können diese Fragen beantwortet werden.

Die Open Source Lösung ermöglicht es, Podcast-Statistiken von Spotify und Apple zu sammeln und in einer Datenbank zu speichern. Die Daten können über eine API abgerufen werden und in einer eigenen App oder einem Dashboard angezeigt werden. Das Projekt löst damit eine der größten Herausforderungen der Podcast-Welt: Die Unabhängigkeit von großen Plattformen wie Spotify und Apple.

Die Open-Source-Lösung
